HOME OFFICE DELUXE

A home-based working mother of two active boys wanted a magnificent office space added to her house. Her request for modern technology and custom storage integrated with her old world partner's desk was fulfilled in this unique octagonal room. Fifteen-foot ceilings presented challenges of scale. The large stacked crown helps bring your eye to the interesting ceiling architecture and split-panel glass-top doors.

Below the complimentary cherry countertops and bead board are lateral files and a bi-fold door. Concealed behind the door are pull-out shelves that can be used as additional work surface. A recessed media cabinet frees up floor space. The spacious office accommodates all the conveniences of a custom office, including comfortable seating for guests and children. The glazed toffee cabinets with cherry accents create a warm color scheme. This working mom has successfully achieved a personal space that incorporates work and family to fit her lifestyle.
